NT Adaptive Raspberry Pi

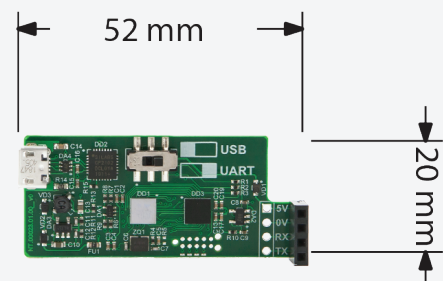

Neuromorphic Memory
Module for Raspberry Pi

576
Neurons

NT Adaptive Module with 576 neurons designed for demonstration, training, developing of neuromorphic memory capabilities. The module is easily connected to the Raspberry Pi and other computers via micro USB.

NT Adaptive Raspberry Pi Artificial Intelligence Module designed for various signals identification. Module can recognize static images, sounds, various electrical signals, texts, data. Hardware level neuromorphic recognition process will accelerate any computer AI possibilities. Module recognize signals in microseconds with only miliwats of power.

Dimensions: **52x20x10 mm**

Module can be connected via **Micro USB** or **TTL** pins.
